(54) RESIN-CERAMIC POWDER COMPOSITE MATERIAL

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a recyclable resin-ceramic powder composite material hardly causing changes in the dielectric constant of a product and therefore in electric properties of an electric part even when processed under a condition such that a relatively large shear force is exerted as in the case of injection molding or extrusion molding, and to provide an antenna and an electric appliance obtained by using the resin-ceramic powder composite material.

SOLUTION: In the resin-ceramic powder composite material, the ceramic powder is composed of a dielectric ceramic having an average particle size of at most 3 μm . The antenna and the electric appliances are obtained by using the resin-ceramic powder composite material.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]
